

YOUR IDEA, INTO PRODUCTION

A leading quality provider of healthcare [EHR software development services](#), Bluebash Consulting Private Limited assists healthcare organizations in improving the secure and safe transmission of e-Prescriptions, communication between doctors and patients, reducing waste, and maximizing productivity.

Records of a patient's medical history kept by their providers in the form of electronic records are known as electronic health records (EHR). Information contained in an EHR can include demographics, history, medications, problems, and other data pertinent to the care provided by the specific provider.

Patients' health history, diagnosis, allergies, medications, laboratory results, and immunization records are stored electronically in an electronic health record instead of on paper in their chart. Unlike traditional methods, these are easy to use and can be used quickly, without the hassle of lengthy examinations.

- **HIPAA Compliance & Security** - We develop [HIPAA-compliant EHR software](#) that protects patient health information (PHI) from unauthorized access. Assuring the security and privacy of information about both patients and healthcare providers.
- **E-Prescribing** - Prescriptions can be safely and securely transmitted using our EHR System. Doctors and clinics can make prescriptions available to pharmacies and healthcare providers through our electronic health records solutions and e-prescribing software.
- **Advanced Integrated Systems** - Our EHR software developer team ensures high-quality solutions by providing the most cutting-edge EHR software, administrative practices, and regulations.

- **Health Information Exchange Interface** - We provide secure and functional HIE solutions by integrating data from multiple sources, providing quality measures, and providing engaging solutions.
- **Mobility and Accessibility** - Healthcare organizations use Bluebash's electronic health record as a platform for mobile access so that workers can enter and update patient data more efficiently and access patient data during treatment visits.
- **Efficient operations** - The [Bluebash](#) Advanced Integrations integrates the billing process to improve both administrative and clinical workflow. These software models can improve productivity and revenue.

It is evident that [Electronic Health Records](#) have many benefits. The ability for patients to access their own personal health records online and the ability for them to access records online are important features. Apart from these two primary benefits listed below are the following benefits to healthcare organizations and practitioners.

- **Minimize errors-** Misspellings and illegible handwriting are common in handwritten documents. While using Electronic Health Records, these mistakes can be safely ignored or minimized.
- **Maximize cost-efficiency-** Using EHRs can result in faster patient care as well as a reduction in costs for healthcare providers.

- **Coordination enhancement-** Healthcare facilities use Electronic Health Records to improve the quality of care and make treatment a pleasant experience for patients - working hand in hand with physicians and professionals.
- **Physician Productivity-** Implementing an EHR can speed up physician diagnoses and digitize administrative tasks, which account for the decrease in healthcare costs.
- **Patient Satisfaction-** With an electronic health record, patients can easily obtain their health information and see what areas need improvement which results in overall patient satisfaction with the quality of care.

Therefore, if you are looking for quality and flexibility in a HIPAA-compliant Electronic Health Records System, Bluebash Consulting Private Limited is the company you should consider at affordable rates based on your requirements.
