

# How to Take Care of Your Monstera Deficiens

## Thai Constellation

When shopping for plants online, be sure to look for the Thai Constellation Monstera, as it is the world's rarest and most desirable plant. This stunning Monstera Deliciosa was originally cultivated in Thailand via tissue culture, hence the "Monstera " part of its name. The Monstera [Thai Constellation Monstera](#) is the coolest cosmic name for the ultimate dream house plant because its leaves have a beautiful marbled pattern that resembles stars in the sky. Their leaves are already gorgeous, but the creamy colour of their fenestration and signature splatters, which can be up to three inches in size, make them a real showstopper.

The stable variegation of the Thai Constellation Monstera sets it apart from the more erratic colouring of the Variegated Monstera Deliciosa Albo Borsigiana. That means the gorgeous variegation on your Thai Constellation will persist, and the plant will not revert to having uniformly green leaves. Good news for everyone: the Thai Constellation actually wants to stand out.

# Care Tips For Monstera Thai Constellation

Just as easy as pie, but simpler. Monstera Thai Constellation requires surprisingly little effort to maintain. The all-green Monstera plant is more resistant to changes in temperature, light, humidity, and fertiliser than the Thai Constellation. They develop at a slower rate, too. With proper care, this indoor plant can reach a height of 6 metres, making it an impressive focal point in any room.

## Lighting And Positioning:

Because of its light requirements, Monstera Thai Constellation should be placed where it will receive ample sunlight throughout the day. So it's a little more picky than Monstera Deliciosa, which can tolerate lower light levels. A shift in the chlorophyll in its tissues causes the variation in leaf colouration. This alteration eliminates colour and prevents the affected areas from solar absorption. That means the photosynthesis in the plant's green parts has to work twice as hard to supply the plant with the energy it needs to grow and flourish.

Make sure it has access to six to eight hours of bright, indirect light per day by placing it near a window. This is the best way to ensure its continued well-being. You may want to invest in some grow lights if your Monstera isn't getting enough natural light. The plant's growth will be stunted, and the leaves won't develop to their full, eye-popping size if there isn't enough light.

## Watering:

When it comes to watering, an abundance of it is far worse than a scarcity of it for the Thai Constellation. Root rot is the main issue. As tropical plants, Monstera require a lot of water, but not so much that the soil becomes soggy. They don't like being overly wet or dry, so finding the sweet spot is important. Watering should be held off until the top few inches of soil have dried out. If you tend to worry excessively, installing a water metre may help.

## Humidity:

The ideal humidity range for the Thai Constellation Monstera is between 60% and 80%. Optimal conditions for rapid expansion of your Thai Constellation include plenty of humidity in the air. Your Thai plant probably needs a little more humidity if the tips of its leaves are brown, if the leaves feel dry and papery, or if the leaf edges are curling. If you notice any of these symptoms, it's time to put your plant on a tray of moist pebbles and tend to it. Then you should get to work immediately in order to increase the humidity levels. If you want to add some moisture to the air, you can get a little humidifier. On the other hand, if you cluster a few plants together, you can raise the relative humidity in that space.

## Fertiliser:

Agricultural Manure; Thai Name for the Constellation Even though Monstera Fertilizer Thai is a medium-to-light feeder, you shouldn't neglect it. Do not over-fertilize your Thai Constellation,

though. Fertilise your houseplants once a month with organic fertiliser. Slow-release fertiliser can also be used, but it should not be applied near the plant's roots.
