# Onlive Server

NETHERLANDS VPS SERVER

VPS

A Virtual Private Server is a hosting environment that mimics a dedicated server within a shared hosting infrastructure.

Netherlands Data Centers

- The Netherlands is a strategic location for hosting due to its advanced digital infrastructure and connectivity to major European internet exchanges.

Low Latency

- Hosting in the Netherlands ensures low latency for European users. Latency refers to the delay in data transmission between the server and the user's device.

Dedicated Resources

With a Netherlands VPS server, you receive dedicated resources like CPU, memory, and storage that are allocated to your server alone.

DEDICATED RESOURCES WILL BRING AWESOME RESULT

Experienced & highly qualified developers
