During the winter season, you may like to find where is my train to keep real-time updates. The winter season is foggy and cold, limiting sightseeing. It may cause delays and affect your train travel hours.

When a train stops at an outstation, it is hard to find the train's location. However, using a smartphone is possible. You just need to apply a few clicks to get the real-time updates, such as live location and expected delay.

You can check the train running status to find updates for your train travel. This article explores the train running status and its benefits during winter. It also explores the steps to know the live location and using the train schedule.

Find Where is My Train in Winter using RailRestro

Winter travel can cause discomfort because of train delays. Fog is the major reason behind train delays in winter. Sometimes, trains can be delayed for long hours because of a foggy environment. In such a situation, you need to keep updated with [where is my train](#) and check PNR regularly.. It informs the current status whether the train is cancelled or not.

If the train is delayed for hours, you have different options like cancelling your train ticket or finding an alternative. However, you must consider that train delays are common during winter to save passengers' lives. So, finding an alternative train does not provide a guarantee to reach the destination on time.

Benefits of Finding Where is My Train in Winter via RailRestro

There are various benefits of finding the train live location in winter using the RailRestro tran app that are discussed below.

- **Reduce Wait Time:** During winter, you may need to wait longer due to delays.
